INDEX OF VOLUME XIII

Abian, Smbat, and Brown, Arthur B. *A theorem on partially ordered sets, with applications to fixed point theorems*, 78
Amitsur, S. A. *Arithmetic linear transformations and abstract prime number theorems*, 83
Appel, K. I. *Partition rings of cyclic groups of odd prime power order*, 373
Atsuji, Masahiko. *Uniform continuity of continuous functions on uniform spaces*, 657
Aurora, Silvio. *On normed algebras whose norms satisfy polynomial identities*, 664
Aurora, Silvio. *On normed algebras which satisfy a reality condition*, 675
Ayoub, Christine W. *Sylow theory for a certain class of operator groups*, 192

Barrett, John H. *Fourth order boundary value problems and comparison theorems*, 625
Barros-Neto, J. de, and Browder, F. E. *The analyticity of kernels*, 645
Bilodeau, G. G. *An inversion formula for the Weierstrass transform*, 593
Browder, F. E., *see* de Barros-Neto and Browder
Browder, Felix E. *Real analytic functions on product spaces and separate analyticity*, 650
Brown, Arthur B., *see* Abian and Brown
Bullen, P. S. *Construction of primitives of generalized derivatives with applications to trigonometric series*, 48
Bullen, P. S. *Properties of the coefficients of orthonormal sequences*, 305
Burgess, C. E. *Homogeneous continua which are almost chainable*, 519

Cole, Randal H. *The expansion problem with boundary conditions at a finite set of points*, 462
Crowe, D. W. *The groups of regular complex polygons*, 149
Crowe, D. W. *Some two-dimensional unitary groups generated by three reflections*, 418
Curtis, Charles W. *A note on induced modules*, 587

Dinculeanu, N., and Foias, C. *Sur la représentation intégrale des certaines opérations linéaires. IV*, 529
Divinsky, N. *General radicals that coincide with the classical radical on rings with D.D.C.*, 639
Dulmage, A. L., *see* Johnson, Dulmage and Mendelsohn

Erdös, P. *Graph theory and probability. II*, 346

Firey, William J. *Polar means of convex bodies and a dual to the Brunn-Minkowski theorem*, 444
Foias, C., *see* Dinculeanu and Foias
Fulkerson, D. R., and Ryser, H. J. *Widths and heights of (0,1)-matrices*, 239

Galvin, Fred, and Jónsson, Bjarni. *Distributive sublattices of a free lattice*, 265
Guinand, A. P. *Reciprocal convergence classes for Fourier series and integrals*, 19

Hartman, Philip. *On stability in the large for systems of ordinary differential equations*, 480
Hoffman, A. J., and Richardson, Moses. *Block design games*, 110
Hu, Sze-Tsen. *Homotopy and isotopy properties of topological spaces*, 167

Jenkins, James A. *Some problems for typically real functions*, 299
Johnson, Diane M., Dulmage, A. L., and Mendelsohn, N. S. *Orthomorphisms of groups and orthogonal latin squares. I*, 356
Jónsson, Bjarni. *Sublattices of a free lattice*, 256
Jónsson, Bjarni, *see* Galvin and Jónsson

Kemp, R. R. D. *On a class of singular differential operators*, 316
Kestelman, H. *Anticommuting linear transformations*, 614
Kleinfeld, Erwin. *Simple algebras of type (1,1) are associative*, 129
Kobayashi, Edward T. *Integration of subspaces derived from a linear transformation field*, 273
Krabbe, Gregers L. *Normal operators on the Banach space $L^p(-\infty, \infty)$. Part I*, 505
Kretschmer, K. S. *Programmes in paired spaces*, 221

Lambek, Joachim. *On the structure of semi-prime rings and their rings of quotients*, 392
LeBlanc, Leon. *Transformation algebras*, 602
Lee, C. Y. *An enumeration problem related to the number of labelled bi-coloured graphs*, 217
Lorch, Lee and Newman, Donald J. *The Lebesgue constants for regular Hausdorff methods*, 283
Macbeath, A. M. *On convex fundamental regions for a lattice*, 177
Majo, A. de. *Tetraspheres. I*, 437
Matlis, Eben. *Some properties of Noetherian domains of dimension 1*, 569
Mendelsohn, N. S., *see* Johnson, Dulmage, and Mendelsohn
Mitchell, Josephine. *Summability methods on matrix spaces*, 63

Nash-Williams, C. St. J. A. *Decomposition of finite graphs into open chains*, 157
Newman, Donald J., *see* Lorch and Newman

Pierce, William A. *Moulton planes*, 427
Protter, M. H. *Properties of solutions of parabolic equations and inequalities*, 331
Putnam, C. R. *A note on non-negative matrices*, 59

Richardson, Moses, *see* Hoffman and Richardson
Riesz, Marcel. *The analytic continuation of the Riemann-Liouville integral in the hyperbolic case*, 37
Rooney, P. G. *On the Hausdorff and trigonometric moment problems*, 454
Ryser, H. J., *see* Fulkerson and Ryser, 239

Schensted, C. *Longest increasing and decreasing subsequences*, 179
Schulzer, M., *see* Swanson and Schulzer
Segal, I. E. *Foundations of the theory of dynamical systems of infinitely many degrees of freedom, II*, 1
Smiley, M. F. *Matrix commutators*, 353
Struik, Ruth Rebekka. *On nilpotent products of cyclic groups. II*, 557
Swanson, C. A., and Schulzer, M. *Asymptotic solutions of equations in Banach space*, 493

Tôgô, Shigeaki. *On the derivation algebras of Lie algebras*, 201

Wright, E. M. *Counting coloured graphs*, 683

Youla, D. C. *A normal form for a matrix under the unitary congruence group*, 694
